

Advanced Ocular Medical Screening

Ocular Coherence Tomography (OCT) and Retina Photo Imaging (Fundus Photos).

In many instances, the health of your eyes can begin to deteriorate before you notice your vision suffering. Using the latest state-of-the-art technology, our experts are able to take a digital photograph of your eye as well as being able to take a 3 dimensional cross sectional scan that allows us to instantly diagnose much earlier than normally possible, common and not-so-common conditions such as

- DIABETIC RETINOPATHY
- MACULAR DEGENERATION
- FLOATERS

This gives us essential information that can help to prevent further damage or enables us to recommend treatment at a much earlier stage. This usually means we can help prevent problems and safeguard your sight for the future.

OCT is a completely painless procedure that is beneficial for all ages. It is very similar to ultrasound but uses light waves instead of sound waves. It shows your Optometrist exactly what's going on beneath the surface of your eye. This information could prove vital for early detection and preventative care.

There is an additional charge for an OCT scan and Fundus Photos of \$42. Ask a member of our staff for more details.

Yes, I would like to get an OCT screening.

No, I understand the benefits and risks and decline the scan.
